

Why can't I find a specific vendor or product?

Last Modified on 18/02/2026 5:24 am EST

We maintain a very large database, and we're still expanding!

There are a few reasons we might be missing a product you're looking for

- We don't yet have that vendor's catalog in our database
- It's a new product from a vendor we already have a relationship with

In either case, [let us know](#) and we'll reach out to them for their latest catalogs so we can [update our database](#).

Checking if we have a specific vendor

1. Navigate to the products results tab
2. Open the **Company** filter under *Supplier filters*
3. Search the list for your vendor of choice

When you select the vendor, we'll show you all of their products on the platform.

The screenshot displays the BenchSci search interface. At the top, the 'Product Type' is set to 'Antibody'. The search bar contains the text 'Enter protein/gene target, clone ID, catalog #...' with an example: 'e.g. "TLR4 human" or "PC10 western blot"'. On the left, a 'Filters' sidebar is visible, with 'Company' highlighted under 'Supplier Filters'. The main content area shows 'PRODUCTS (10.4 M)' and 'FIGURES (6.9 M)'. Two product results are displayed:

- Monoclonal Anti-beta-Actin antibody produced in mouse** (Sigma-Aldrich | A5441) with 9043 Figures. Assays include WB, IS, IF, IP, IHC, CHIP, FCS, ELISA, and WB (NW).
- Monoclonal ANTI-FLAG(R) M2 antibody produced in mouse** (Sigma-Aldrich | F1804) with 7525 Figures. Assays include WB, IP, IS, IF, CHIP, ICC, IHC, IF (ICM), and ELISA.

Searching for a specific product

If you are [searching for a specific product](#), simply type the catalog number of the product into the search bar. Clicking the search suggestion will navigate you directly to the product page.
